Dairy

Agriculture and Allied Sectors in India

Sector at a Glance

Dairy

Agriculture and Allied Sectors in India

The '**Sector-at-a-Glance**' provides an easy-to-read overview and basic understanding of a sector, sub-sector, or thematic area. The facts and insights on the sector are supported by relevant data and best practices from credible government and multilateral sources. The document covers the structure, key trends, opportunities and challenges, government initiatives, and the way forward for the sector.

Overview

Milk and milk products are a key source of food, nutrition and livelihoods in India. Since 2017-18, the dairy sector has expanded at 5.9% on average, accounting for almost 5% of the country's GDP in 2022-23. Over 95% of India's milk is sourced from cattle including buffaloes and cows, while approximately 3% is produced by small ruminants like goats. The dairy value chain generates employment and economic value in both rural and urban areas. While over 8 crore people are engaged in the overall dairy industry, about 1.7 crore dairy farmers are engaged in dairy cooperative societies and unions, which are an essential component of the organised dairy industry. India's dairy exports between 2020-21 and 2022-23 were valued at INR 6,700 crores.

Steady government investments, increasing technology adoption, and rising consumer demand are significant tailwinds for the sector. These are reflected in the numerous initiatives undertaken by the government to promote the dairy industry such as the Rashtriya Gokul Mission, National Digital Livestock Mission, e-Gopala, and Pradhan Mantri Kisan Sampada Yojana. Increased focus on enhancing the productivity of milch animals, additional support for farmers, and upgradation of the dairy value chain will significantly strengthen the sector.

As the single largest agricultural commodity, dairy contributes nearly 5% to India's Gross Domestic Product (GDP)¹ and 20% to the overall value of output from agriculture.² The dairy sector has witnessed substantial expansion over the last five years, achieving a compounded annual growth rate (CAGR) of 5.9% between 2017-18 and 2021-22.² As of 2022, the sector employed more than eight crore farmers in different capacities and was instrumental in providing livelihood opportunities to small and marginalised farmers.³ Over 1.7 crore farmers are part of the organised sector through dairy cooperative societies and unions; more than 50 lakh of them are women.⁴ India's dairy exports in 2022 were estimated to constitute 10% of Asia's dairy exports and 1% of global dairy product exports.⁵ The value of India's dairy exports in 2022-23 is estimated to be INR 2,270 crores.⁶

Dairy Sector Value Chain

The value chain of the dairy industry is highly complex and **varies between the organised and unorganised sectors** (Figure 2).⁷ Within the organised sector, **dairy cooperatives play a significant role throughout the value chain** and are involved in collection, chilling and bulk cooling, processing and packaging, and marketing of products. However, **in the unorganised sector, local milk producers and vendors** take on these roles in varying degrees.⁸

About **48% of the milk produced in India is self-consumed or marketed to non-producers in rural areas**. The rest is **earmarked for urban consumption**. The organised sector (Figure 3) oversees only 40% of the milk in the urban market (20% each by dairy cooperatives and private companies) while the remaining 60% is managed by the unorganised sector.⁹

As of 2022-23, there are **1.96 lakh village-level dairy cooperative societies and 228 dairy cooperative milk unions**. A total of **1.7 crore farmers** are a part of this organised sector.⁴

Value chain trends

This section of the report discusses the trends in the dairy sector using a value chain approach and highlights some key data points and facts pertaining to:

1. Milch animals population, species-wise contribution and productivity (Inputs)
2. Production volume, growth, per capita availability, state-wise distribution (Production)
3. Dairy cold chain (Processing)
4. Milk plants and factories (Processing)
5. International trade (Marketing)

Inputs: Milch Animals

The sector has seen an increasing demand for crossbred cows over the years, with the number of crossbred cows increasing by 34% from 2012 to 2019.⁴ Meanwhile, the number of buffaloes and indigenous cows has been nearly constant (Figure 4). This preference for crossbred cows can be partly explained by the higher productivity of these milch animals in comparison to the indigenous varieties.

Figure 4: Population of Milch Animals (Cr)

Source: Basic Animal Husbandry Statistics 2022

In 2021-22, **over 45% of India's milk was produced by indigenous¹⁰ or non-descript¹¹ buffaloes**, followed by 30% from cross-bred¹² cows, and 2% comes from exotic¹³ cows (Figure 5).⁴ Small ruminants remain an underutilised milk source with goat milk accountings for approximately 3% of the total milk production. It is also worth noting that the productivity of exotic and crossbred cows (11.4 and 8.3 kg/day respectively) is higher as compared to indigenous milch animals (less than 6.6 kg/day).¹⁴

Figure 5: Species-wise Milk Contribution (2021-22)

¹⁰ Animals that belong to descript/non-descript breeds of indigenous origins. Retrieved from Department of Animal Husbandry and Dairying. (2019). *20th Livestock Census 2019 All India Report*.

¹¹ Indigenous breeds that cannot be classified as a particular/ recognised breed or are not more than 50% similar to any recognised breed. Retrieved from Department of Animal Husbandry and Dairying. (2019). *20th Livestock Census 2019 All India Report*.

¹² Animals produced by crossing indigenous animals with exotic breeds or indigenous animals with exotic inheritance. Retrieved from Department of Animal Husbandry and Dairying. (2019). *20th Livestock Census 2019 All India Report*.

¹³ Animals which are developed in other countries, e.g. Jersey and Holstein Friesian cows. Retrieved from Department of Animal Husbandry and Dairying. (2019). *20th Livestock Census 2019 All India Report*.

¹⁴ Department of Animal Husbandry and Dairying. (2022). *Basic Animal Husbandry Statistics 2022*.

Figure 6: Productivity of Milch Animals in India (kg/day)

Source: Department of Animal Husbandry and Dairying Annual Report (2022-23)

In India, small ruminants mostly include goats and sheep of which goat are valuable milk contributors. They play a crucial role in enhancing the food security and livelihoods of small-scale dairy farmers, especially through integrated farming interventions. They are also more climate resilient as compared to other ruminants such as cows.

Production: Milk Production and Availability

India is the **world's largest dairy producer, contributing to 24% of the global milk production**. In 2021–2022, **India produced 221.06 million tonnes of milk**, compared to 924.8 million tonnes globally.⁴

Milk production in India has been growing steadily over the past decade, from 132 million tonnes in 2012–13 to 221.06 million tonnes in 2021–22, at a CAGR of 5.29%.⁴ The year-on-year growth has ranged between 5% to 7% since 2014–15, indicating a steady trend (Figure 7).

Figure 7: Volume and Annual Growth Rate of Milk Production

Source: Department of Animal Husbandry and Dairying Annual Report 2022-23

At the same time, the per capita availability of milk has increased from 289 grams per day in 2011-12 to 444 grams per day in 2021-22 (Figure 8).⁴

Dairy production varies considerably among the Indian states. In 2021-22, **ten states in India were responsible for 82% of the national milk production**. Rajasthan and Uttar Pradesh are the biggest contributors (15% each), followed by Madhya Pradesh (9%), Gujarat (8%), Andhra Pradesh (7%), Maharashtra, Punjab, Bihar (approximately 6% each), and Karnataka and Haryana (5% respectively).¹⁴

In real terms, the total output value of the dairy sector increased from INR 449,213 crores in 2017-18 to INR 561,692 crores in 2021-22, registering a CAGR of 5.9%.²

Processing: Dairy Cold Chain

Dairy cooperatives make significant contributions to the industry's value chain through their cold chain infrastructure. The total capacity of the cooperatives' bulk milk coolers is 57,156 thousand litres (TL), milk chilling centres is 18,653 thousand litres per day (TLPD), and dairy plants is estimated at 95,508 TLPD.¹⁵

Dairy cooperatives in the western region of India have the highest processing capacity accounting for 50% of the processing capacity of bulk milk coolers, milk chilling centres and dairy plants concentrated in the region (Figure 10). This demonstrates the uneven distribution of cold chain infrastructure as well.

Figure 10: Region-wise Distribution of Dairy Cooperative Cold Chain Infrastructural Capacity, 2022

Source: NDDB Annual Report 2021-22

Processing: Milk Plants and Factories

In the first quarter of 2022, India had 1,793 liquid milk plants and 255 milk processing factories. These facilities are highly concentrated in a few states with almost 75% of the total liquid milk plants located in four states and 55% of the milk-processing factories in six states (Figure 11). Tamil Nadu alone has 37% (664) of the country's liquid milk plants, followed by Odisha (379), Andhra Pradesh (190), and Jharkhand (96).¹⁴

Figure 11: State-wise Distribution of Liquid Milk Plants in India, 2022

Source: Basic Animal Husbandry Statistics 2022

¹⁵ National Dairy Development Board. (2023). *Annual Report 2021-22*.

With 41 milk processing factories, Karnataka had the highest number of milk-processing factories in 2022 (16.1%), followed by Tamil Nadu (10.2%), Rajasthan (9%), Gujarat (7.5%), Madhya Pradesh (6.7%) and Bihar (6.3%).¹⁴

Figure 12: State-wise Distribution of Milk-Processing Factories in India, 2022

Source: Basic Animal Husbandry Statistics 2022

Trade & Marketing: International Trade

Export of Dairy Products

In 2022, India's dairy exports comprised 10% of Asia's dairy exports and 1% of global dairy product exports.⁵ India's dairy exports have grown at a CAGR of 11% since 2020-21. On average, India exported 77,000 metric tonnes (MT) of dairy products between 2020-21 and 2022-23 (Figure 13).⁶ The total value of dairy exports from 2020-21 to 2022-23 is valued at INR 6,700 Crores.

Value-added dairy products are an important component of India's dairy exports. Butter, ghee and dairy spreads as well as skimmed milk powder are high-value products in this category.

Figure 13: Quantity and Value of Dairy Exports

Source: Agricultural and Processed Food Products Export Development Authority Agri Exchange

Export of Value-added Dairy Products by India (2021-22)¹

	 Butter, Ghee and Dairy Spreads	 Cheese	 Skimmed Milk Powder
Quantity	33,021 Mn T	7,648 Mn T	46,286 Mn T
Value ¹⁶	INR 1,411 Cr	INR 307 Cr	INR 1,094 Cr

¹⁶ Converted from USD to INR at the rate of 1 USD = INR 82.65 as on 6 July 2023

The total value of dairy exports to the top five destinations in 2022-23 collectively amounted to INR 1,464 crores, equivalent to about 64% of the total value of dairy exports in the year.⁶ In terms of quantity and value, Bangladesh was the biggest recipient of India's dairy exports (Figure 14).

Figure 14: Value of Dairy Exports to Top 5 Destinations (INR Cr)

Source: Agricultural and Processed Food Products Export Development Authority Agri Exchange

Import of Dairy Products

Additionally, India also relies on imports for some of its dairy needs, with the largest share originating from France (Figure 15).⁶ The most commonly imported products are skimmed milk powder and butter.¹⁷ Some of the factors affecting India's decision to import milk and milk products are limited stocks of dairy products such as ghee, butter and fats, as well as inclement weather and disease outbreaks.

Figure 15: Value of Dairy Imports from Top 5 Sources

Source: Agricultural and Processed Food Products Export Development Authority Agri Exchange

Opportunities and challenges

Opportunities

Government investments and policy priorities:

The dairy sector has grown steadily over the years due to strong investment and policies from the government. For instance, the budgetary allocation for the livestock and dairy sector increased by 26% in 2021-22 in comparison to 2020-21, and by 10% in 2022-23 in comparison to the previous year.¹⁸ This has been complemented by initiatives that demonstrate an increase in government subsidies, expand dairy-processing capacity, and provide tax relief for small and medium dairy farmers.

Growing demand for milk and milk products:

According to the National Family Health Survey (2020-21), nearly half (48.8%) of the country's population consumes milk or milk products every day.¹⁹ An increase in income levels and greater awareness of the nutritional value of milk is expected to further increase the demand for milk and milk products.

¹⁹ International Institute for Population Sciences (IIPS) and ICF. (2021). *National Family Health Survey - 5 (2019-21)*

Technology adoption in the dairy sector:

The National Digital Livestock Mission, a digital platform jointly developed by the Department of Animal Husbandry and Dairying and the National Dairy Development Board, is expected to transform the dairy sector. It aims to create a farmer-centric ecosystem that will increase access to services and markets, and provide verified information to livestock and dairy farmers.²⁰ In addition, technologies such as artificial intelligence, blockchain, and big data analytics present opportunities to enhance productivity, reduce wastage, and increase transparency thereby generating more income for dairy farmers.

One Health approach for livestock health management:

Livestock health remains a major concern in the dairy sector. The National One Health Mission, approved by the Prime Minister's Science, Technology, and Innovation Advisory Council, is integral to alleviating these concerns. The main elements of the Mission include integrated disease surveillance, robust outbreak investigation systems, and targeted research and development.²¹ The Department of Animal Husbandry and Dairying has also set up a One Health Support Unit with a clear roadmap for implementation of this approach.²²

Increasing entrepreneur driven models:

With the support of the Startup India initiative and schemes such as the Venture Capital Assistance Scheme by the Ministry of Agriculture, Agritech start-ups have seen remarkable growth leading to approximately 1,300 such startups in India as of April 2022.²³ Additionally, the Dairy Investment Accelerator launched by the Department of Animal Husbandry and Dairying has been tasked with promoting investment and facilitating entrepreneurship in the dairy sector.²⁴ There is also a focus on promoting women entrepreneurs in the dairy sector through the self-help group movement as well as targeted schemes.²⁵

Research and development:

India has laid a concerted focus on promoting research and development (R&D) in the livestock and dairy sector. For example, the National Dairy Research Institute is responsible for R&D related to dairy production, processing, and extension/management.²⁶ Additionally, the Livestock and Animal Biotechnology Division of the Department of Biotechnology is engaged in R&D in the thematic areas of indigenous vaccines, genomics and genetic improvement, and nutrition interventions.²⁷ These initiatives all seek to enhance productivity and support livestock management.

27 Department of Biotechnology. (n.d.). *Animal Biotechnology*. Retrieved 6 July 2023.

 Sectoral challenges	- Poor uptake of technology (e.g., precision dairy farming). - Low bargaining power among small and medium producers. - About 3% of the total milk produced comes from goats indicating need for stronger policy support for small ruminants (e.g., goats, sheep). - Approximately 50% Indians consume milk or milk products every day leading to high consumption of dairy products with low surplus for export. - Poor yield capacity of indigenous breeds as compared to exotic breeds (<6.6 kg per day vs 11.4 kg/day).
 Input-level challenges	- Shortage and disrupted supply of fodder - Limited knowledge and training on hygienic and scientific milking practices, maintenance of the clean animal sheds, importance of nutritious feed to animals, etc.
 Production-level challenges	- High risk of cattle diseases such as Lumpy Skin Disease and Foot and Mouth Disease - Environmental and health risks associated with industrialized cattle farming - animal cruelty, zoonotic disease transmission, greenhouse gas emissions
 Post-production-level challenges	- Limited shelf life of dairy products - Inadequate cold chain transport systems and facilities; most dairy cooperatives cold chain infrastructure concentrated in Western India
 Challenges related to the unorganised dairy sector	- Limited or sub-scale cold chain infrastructure in the informal sector - Restricted financial flows into the unorganised sector further inhibiting the formalisation of the sector - Inadequate credible and comprehensive production data - Difficult to ensure compliance with food safety & quality standards in informal sector, leading to adulteration and inferior quality milk and milk products

SECTORAL INTERVENTIONS

National Dairy Development Board

Established in 1965 to strengthen farmer-owned institutions and support the implementation of national dairy policies

National Livestock Mission

Launched with the aim of breed improvement and entrepreneurship development; implemented via 3 sub-missions:

1. Breed Development of Livestock and Poultry
2. Feed and Fodder Development
3. Innovation and Extension

Operation Flood

Launched in 1970 to support and promote dairy cooperatives in India.

Kisan Credit Card Scheme

Introduced to provide adequate and timely credit support to dairy farmers.

National Digital Livestock Mission

Implemented to increase productivity, control diseases, and ensure quality of livestock.

Livestock Census and Integrated Sample Survey

Initiated for the purpose of providing animal husbandry statistics and estimations of livestock products.

INPUT-LEVEL INTERVENTIONS

National Dairy Plan

Started in 2012 to increase productivity of milch animals through scientific breeding and nutrition.

Rashtriya Gokul Mission

Implemented to develop bovine breeding in a scientific manner to improve cow productivity and milk production.

Animal Husbandry Infrastructure Development Fund

Introduced to encourage Indian entrepreneurs to establish and add value to dairy infrastructure and animal feed plants.

PRODUCTION-LEVEL INTERVENTIONS

Livestock Health and Disease Control Scheme

Initiated to provide vaccination for livestock to prevent and control the spread of diseases.

E-Gopala

Launched as a digital platform to manage livestock and dairy activities, market access, animal healthcare, breeding services.

National One Health Mission

Created as an overarching programme to promote research, integrate databases, and streamline processes.

POST PRODUCTION-LEVEL INTERVENTIONS

National Programme for Dairy Development

Launched to improve the quality of milk by strengthening milk testing and chilling infrastructure.

Pradhan Mantri Kisan Sampada Yojana

Established to make provision for value addition through mega food parks and ensure cold chain infrastructure.

Dairy Processing & Infrastructure Development Fund

Launched in 2017-18 to modernise and strengthen infrastructure for milk processing.

 Increased focus on enhancing productivity and health of milch animals	Productivity enhancement - Upgraded feed supplements like Samvridhi that improve milk yield and content³⁰ - Focus on National Dairy Development Board's (NDDB) approach to improve the quantity and quality of fodder³¹ - Advancement of integrated farming techniques that combine livestock, crops and poultry - Promotion of small ruminants and diversification of livestock for higher productivity	Livestock health and living conditions - Adoption of the One Health approach at all levels to include integrated disease surveillance, joint outbreak response, and pandemic preparedness - Improved vaccination coverage to reduce morbidity and mortality of livestock from common diseases such as lumpy skin disease, foot and mouth disease, and Brucellosis - Scaling up of research and manufacturing of indigenous vaccines for livestock
 Enhanced support to dairy farmers	Better access and services for dairy farmers - Strengthening of village cooperatives to involve more dairy farmers in the organised sector - Improved access to markets through digitalisation - Creation of opportunities for women through targeted loans, training, and market access to enable entrepreneurship.	Capacity building and upskilling³² - Training of workforce on scientific milking techniques, adoption of hygienic milking practices, and use of chilling plants, bulk milk coolers, etc. - Capacity building of community resource persons on animal health and livestock management - Upskilling dairy farmers on marketing and business management
 Upgradation of the dairy value chain	Dairy processing infrastructure - Increase in number of dairy processing plants and cold storage facilities - Modernisation of cold storage and transportation facilities to minimise wastage and retain the quality of milk products - Promotion of dairy startups to enable innovations in milking, processing, logistics, and distribution of milk and milk products	Digitalisation & technology - Adoption of digitisation to track real-time data on production, procurement, processing, and distribution of milk and milk products to avoid wastage - Precision Dairy Farming to track physiological behaviour and production indicators for better farm management³³
