Overview

The micro, small and medium enterprise (MSME) cluster development strategy addresses the heterogeneous nature of the MSME sector. The strategy orchestrates a multifaceted approach that harnesses the synergies of infrastructure development, skill enhancement, market expansion and brand positioning, empowering MSMEs to thrive individually while contributing significantly to the overall sectoral growth. Cluster development can enhance connections across various stages of the value chain. Integrating into the global value chain aids MSMEs in improving efficiency and accessing new markets, resulting in reduced waste and increased value creation for cluster members.

The government has bolstered the competitiveness of MSMEs through initiatives such as the Cluster Development Programme (CDP), Scheme of Fund for Regeneration of Traditional Industries (SFURTI) and One District One Product (ODOP). Notably, the CDP has completed 92 common facility centres (CFCs) and 200 infrastructure development projects as of December 2023¹, with active participation from states like Maharashtra, Tamil Nadu and Uttar Pradesh. Additionally, SFURTI has made significant progress by establishing 513 clusters across 29 states, benefiting 298,580 artisans as of fiscal 2023², especially in states like Odisha, Uttar Pradesh and Madhya Pradesh. Moreover, the ODOP Initiative has left a considerable impact by supporting 713 districts in 35 states as per latest available data of September 2022³, emphasising product diversification, enhanced packaging, and market awareness. Uttar Pradesh has excelled in this regard, adopting a district-centric approach, and fostering innovation through dedicated incubation centres.

Cluster development is a strategic approach to boost growth and competitiveness of MSMEs within a particular geographic area or industry. It involves the creation of collaborative networks or clusters, where MSMEs can access shared resources, infrastructure and specialised support services. The programmes include two types of interventions:

- Hard interventions - refers to tangible and material efforts to improve infrastructure, facilities and other physical aspects of clusters. These efforts may include the creation of CFCs, procurement of machinery, working capital and raw material banks, tools and technological upgradation, research and development (R&D) centres, common logistics centres, etc.
- Soft interventions - includes non-physical and non-material actions or measures to promote the growth and development of clusters. These interventions focus on enhancing the capabilities, skills, knowledge, and collaborative efforts of the cluster members.

² Ministry of MSME, 2023, SFURTI

³ Ministry of Food Processing Industries, 2022, ODOP

Figure 1

Facilities offered through cluster development initiatives

Common facility centres:

Shared resource hubs where multiple businesses or individuals can access specialised facilities and services, such as testing facilities and raw material depot

Market linkages:

Access to new business opportunities through buyer-seller meets, trade fairs and exhibitions, assistance in marketing and branding.

Networking and knowledge sharing:

Platforms for networking, collaboration, and knowledge exchange among their members.

Support to upgrade technology:

Supporting clusters in the adoption of cutting-edge technologies and facilitating technology adoption training programs.

Training and skill development:

Training and development facilities to enhance the capabilities of businesses.

Research and Development (R&D) support:

Setting up R&D centres, providing technical expertise, and facilitating collaboration with research institutions.

Cluster development gains global favour

UNIDO⁴ identifies clusters as geographically concentrated and interconnected enterprises with flexible boundaries shaped by transport and culture. These clusters, primarily composed of MSMEs, capitalise on economies of scale by producing similar goods and collaborating on procurement and innovation. Additionally, cluster enterprises share common challenges such as limited capital and infrastructure, necessitating cluster development for inclusive growth and effective value chain integration.

Data from both developing and developed countries alike shows that enterprises can achieve accelerated growth by fostering mutually beneficial relationships and collaborating with nearby businesses that share similar interests.

⁴ UNIDO CDP

Example of some countries that have experienced the beneficial outcomes of cluster development

Israel's Silicon Wadi: The forces behind cluster formation⁵

Cluster development played a crucial role in Israel's transformation into a global tech leader. Israel's economy, initially reliant on agriculture, faced challenges such as limited access to capital and a technology gap. Silicon Wadi, centred around information and communication technology (ICT), emerged as a response, capitalising on the nation's human capital and fostering a conducive environment for tech innovation. With government support, including the proximity of ICT firms to academic institutions, export encouragement, and establishment of R&D centres, cluster development propelled Israel's ascent to a tech powerhouse, driving innovation and strategic partnerships with global tech giants.

The German Mittelstand: A Blueprint for Success:⁶

Germany's Mittelstand, a vibrant ecosystem of small and medium-sized enterprises (SMEs) ranging from family-owned businesses to cutting-edge startups, exemplifies how SMEs can overcome market access challenges and thrive globally. The German Ministry for SMEs played a pivotal role by creating a pro-innovation environment, offering market-driven funding programs, and establishing the Central Innovation Programme (ZIM) to grant financial support for technology-focused research and development. The 'go cluster' program fostered innovation networks, facilitating collaboration between SMEs and research institutes. As a result, the Mittelstand's adaptability, commitment to innovation, and quality-driven ethos have enabled approximately 44% of German SMEs to export their products globally, contributing significantly to the nation's economy.

Canada: Wine Cluster Niagara, Ontario:⁷

The Niagara wine cluster in Canada is known for its exceptional and distinctive wines. However, the cluster encountered challenges in marketing and distributing Ontario wines effectively. To tackle this issue, the Quebec Provincial Government assigned cluster development activities to SGF, a government holding company. Through strategic cluster-level investments in advertising and marketing, they successfully promoted unique "ice wines," leading to international awards.

China: Shenzhen electronics cluster⁸

The country has experienced economic growth through the establishment of clusters, especially in labour-intensive manufacturing sectors. For instance, electronics manufacturing clusters in Shenzhen played a pivotal role in China's global leadership in technology exports. Dedicated electronics manufacturing zones, R&D centres, testing and certification services are the key services provided to facilitate innovation, collaboration, and specialisation, positioning China as a key player in the global market.

Cluster development in India⁹

Cluster development in India has witnessed significant transformation over the years, shaped by diverse policy initiatives, economic reforms, and shifts in industrial strategies.

Cluster development: Transforming India's MSME landscape

Cluster development has emerged as a catalyst for growth and advancement of MSMEs in India. It encourages collaboration, enhances competitiveness and promotes sustainable practices.

¹⁰ UNIDO approach to cluster development

¹¹ Ministry of MSME Generation of Traditional Industries (SFURTI)

¹² Haryana Mini Cluster Development scheme

¹³ Gujarat Mini Cluster development scheme

¹⁴ Ministry of Food Processing Industries, One District One Product

A UNIDO study¹⁵ has identified more than 6,000 clusters in the traditional handloom, handicraft and modern SME industry segments. MSMEs constitute the largest segment in majority of Indian clusters. Some of these clusters account for 70-80% of the country's total production in specific product categories.

India has the highest number of clusters globally. Development has been initiated in over 2,000 clusters through various CDPs, primarily leveraging government assistance schemes.

According to a survey conducted by the National Productivity Council¹⁶, overall employment at beneficiary clusters of MSE-CDP surged 8-10% following the implementation of the scheme. Female employment also rose 11-13%.

Figure 3: Clusters: Empowering MSME productivity

The pharmaceutical cluster in Karnal (Haryana) and the cashew cluster in Ganjam (Odisha), for instance, have experienced significant improvements in production, cost efficiency and innovation through the CDP.

Despite the growing importance of cluster development, most of the programmes are still concentrated in major states like Uttar Pradesh, Maharashtra, Madhya Pradesh and Rajasthan. States and union territories such as Sikkim, Ladakh and Puducherry require more focus and attention for cluster development initiatives.

¹⁶ National Productivity Council, Evaluation Study of MSE-CDP

Best practices in India for nurturing MSME clusters

Maharashtra grape cluster¹⁷

The Maharashtra grape cluster was formed under a public-private partnership initiative.

- It is owned and governed by its members (grape cooperatives) but with considerable financial support from the state government. This includes subsidies for the salaries of the governing body for the first three years and consultancy services.
- Maharashtra grapes cluster undertook number of activities such as constructing pre-cooling and cold storage facilities for every cooperative, with the help of a government credit line, to improve the forward and backward linkages of the value chain.
- To build an international reputation for the produce, it supported the marketing of all grapes under a single brand name.
- Its most important contributions were (i) creating a knowledge base and (ii) facilitating the implementation and application of new knowledge. By providing its member farmers with free access to Global Good Agricultural Practices (GLOBALGAP) quality requirements, Maharashtra grapes helped remove the information barrier. It provided farmers with an annual handbook that contained up-to-date lists of fertilisers and pesticides that were permitted or prohibited by the standards. Farmers and grape handlers/sorters learned about the most recent techniques through workshops and field demonstrations.

Kottayam rubber processing cluster¹⁸

The Kottayam rubber cluster in Kerala comprises some 516 enterprises from various product groups such as footwear, adhesives, rubber cements and solutions, rubber bands, latex thread, and gloves, among others.

- The cluster faced tough competition from southeast Asian countries, coupled with challenges such as high production costs, inadequate infrastructure and limited marketing initiatives.
- These issues were effectively addressed through a cluster-based development approach.
- A Cluster Development Co-ordination Committee (CDCC) was formed with the involvement of key stakeholders and support institutions. It created a network utilising central government scheme, establishing an integrated mixing mill, participating in domestic and international fairs, and engaging national and international service providers.
- SMEs utilized the services of private business development service (BDS) providers extensively for management training and in the preparation of common project proposals.
- The cluster focused on developing new products and technologies, specifically targeting the export market. Throughout this process, the state government took special interest in promoting a supportive policy framework. As a result, the consortium company has secured a profit of Rs 1 million (USD23,000) in the past 15 months of operation.

¹⁷ Asian Development Bank, 2017, Cluster Finance in Sri Lanka GAP Report

¹⁸ Asian Development Bank, 2017, Cluster Finance in Sri Lanka GAP Report

Ludhiana foundry cluster¹⁹

This cluster, of about 200 units and engaged in the production of sewing machine and machine tool parts, exemplifies how cluster development can unlock MSME potential.

- The main constraints of the cluster are non-availability of working capital, inappropriate pricing of the products and lack of technological awareness.
- With the intervention of a cluster development programme, units adopted cleaner production methods thus reducing their coke consumption, improving workplace conditions and adopting socially friendly production.
- Workshops on product redesigning were conducted, and linkages were established between MSMEs and banks/public funding agencies for resolving finance-related issues.

Chanderi craft cluster²⁰

This cluster, renowned for its gold-embellished fabric weaving, showcases the benefits of the CDP.

- Under the Foundation for MSME Clusters' (FMC) intervention, the cluster overcame challenges such as yarn quality, limited market access, water supply issues, poor roads and social security gaps.
- The programme introduced service providers to enhance product quality and stimulate design innovation.
- The CDP at Chanderi has led to the formation of a weavers' organisation, which has been able to do business with high-end customers.
- As a result, the weavers are earning higher wages and making profits. They have also been able to access credit through official channels.
- At the same time, several improvements were made to the technical and related infrastructure, such as better dyeing techniques, wider looms, a storage facility for yarn, and a place to dye the fabric.

²⁰ United Nations Industrial Development Organization, 2009, Development of Clusters and Networks of SMEs

Challenges and opportunities

Major challenges

	Uniform cluster strategy restricts resource deployment and adaptation to cluster-specific needs Adoption of a uniform cluster development strategy at a pan-India level is unlikely to accommodate the unique needs of clusters in different regions and sectors. It results in inefficient deployment of resources, both in terms of soft interventions (including skill development and capacity building) and hard interventions (including infrastructure and technology). Consequently, the effectiveness of resource allocation and utilisation is compromised, hindering the overall success and impact of cluster development initiatives. Given the broad diversity encompassed by clusters, ranging from small to large, early-stage to mature, and resultant leading and lagging clusters within each sub-sector, the UK Sinha Expert Committee²¹ on MSMEs suggested customising the CDP to meet the unique requirements of clusters. The recommendation underscores the importance of prioritising and selecting clusters based on their inherent characteristics and specific requirements.
	Lack of cooperation among firms participating in MSME clusters The collective capability of participating firms within MSME clusters is hindered by the lack of cooperation stemming from trust issues. This hinders their ability to share best practices and coordinate their efforts on procurement of goods, utilisation of testing facilities, management of transportation and logistics, and participation in training and skill development initiatives. According to UNIDO's cluster development report²², fostering mutual trust among competing SMEs in Bagru, near Jaipur, was challenging. Initial reluctance of firms to participate in introductory meetings highlighted the difficulty in rebuilding trust after years of rivalry.
	Insufficient awareness among MSMEs regarding cluster development procedures and availability of CDPs Lack of knowledge and understanding regarding cluster development procedures and the availability of CDPs results in missed opportunities for MSMEs to engage in cluster development initiatives. This limits their access to valuable support, resources and networking opportunities. According to the Atal Bihari Vajpayee Institute of Good Governance and Policy Analysis (AIGGPA) annual report²³, most clusters are not prepared to take collective action due to lack of awareness.

²¹ UK Sinha Expert Committee report on MSME

²² United Nations Industrial Development Organization, 2009, Development of Clusters and Networks of SMEs

²³ Government of Madhya Pradesh, State Cluster Development Policy

Absence of database addressing region- and sector-specific needs hinders CDP enhancement

Without a robust database, it is difficult to tailor CDPs to meet the specific requirements of each region and sector. The absence of accurate and up-to-date data on factors such as market trends, infrastructure gaps, skill requirements and technological advancements hampers the formulation of targeted interventions.

As stated in the AIGGPA annual report²⁴, lack of a database hinders resource coordination among stakeholders, making cluster selection, goal setting, support prioritisation and progress monitoring challenging.

²⁴ Government of Madhya Pradesh, State Cluster Development Policy

Opportunities

	Policy advocacy Strong clusters can engage in policy advocacy at the local, regional and national levels. They can influence policies that support their growth and competitiveness, creating a more favourable business environment. For instance, during a UNIDO project²⁵ to support Pune's food-processing cluster, entrepreneurs faced compliance issues with the Food Adulteration Act. The cluster's fragmented representative associations hindered direct communication with federal-level food regulators. To tackle this, UNIDO initiated an intensive awareness campaign, involving both individual and group meetings. Development of underdeveloped industrial areas MSMEs can benefit from reduced competition, larger customer bases and favourable business environments, enabling them to expand, innovate and thrive within these revitalised regions. One such example²⁶ is the readymade garment cluster in Hubli, which has become a role model for the government of Karnataka to replicate, especially in economically backward areas. Hubli never had any textile or garment industry. Thus, through a collaborative effort between the public and private sectors, the establishment of a readymade garment cluster aims to unlock the area's untapped potential, making a substantial impact on the region. Presently, the cluster provides services to renowned brands and has successfully introduced its own brand called 'Dave Export', engaging in garment and apparel manufacturing. Value chain integration Cluster development can enhance connections across various stages of the value chain. Integrating into the global value chain aids MSMEs in improving efficiency and accessing new markets, resulting in reduced waste and increased value creation for cluster members. For instance, the Tiruchirappalli Engineering and Technology Cluster²⁰, with many small sub-contractors for the local BHEL unit, has significantly strengthened its fabrication excellence through supply-chain arrangements. The cluster has partnered with Tamil Nadu Industrial Development Corporation through a joint venture agreement, providing comprehensive high-precision heavy engineering machining facilities and a pre-processing facility all under one roof. This setup helps elevate their manufacturing capabilities, diversify their product lines, and foster growth of their businesses.
---	---

²⁵ United Nations Industrial Development Organization, 2009, Development of Clusters and Networks of SMEs

²⁶ National Productivity Council, Evaluation Study of MSE-CDP

Building research and development (R&D) infrastructure

R&D presents a significant opportunity for Indian MSME clusters to enhance innovation and competitiveness. By investing in research and development, MSMEs can develop new products, improve processes, and expand their market presence, driving growth and sustainability. As per World Bank estimates, India spent around 0.66% of its gross domestic product (GDP) on R&D in 2023, while the world average was around 2.63%.²⁷

Indian MSME clusters can draw inspiration from Israel's Silicon Wadi²⁸ by establishing R&D centres, fostering collaboration between academia and industry and incentivizing exports. This approach can nurture tech clusters, driving economic growth and global competitiveness.

²⁷ World Bank, 2023, Research and development expenditure (% of GDP) – India

²⁸ The World Bank, 2016, A Case Study of Israel

Government interventions

The central government has implemented several initiatives for MSME cluster development. About 12% of the overall MSME budget for fiscal 2024 has been allocated for infrastructure development. The main contributors are CDP²⁹ and SFURTI³⁰, primarily benefiting micro-enterprises as per the National Productivity Council.

Figure 4: Allocation for infrastructure development in the Centre's MSME budget³¹

In Rs Cr

Note: i) A – Actual; BE – Budget estimates; RE – Revised estimates

ii) Includes infrastructure development, capacity building and SFURTI budget outlay

States have also introduced dedicated schemes like Haryana and Gujarat have implemented dedicated schemes, such as the Mini Cluster Development Scheme, while Kerala and Maharashtra have introduced the State Cluster Scheme

²⁹ MSE-CDP

³¹ Government of India, 2023-2024, Budget Speech

Figure 5

Haryana State Mini Cluster Development Scheme³³

Haryana government contributes up to 90% for establishing CFCs, while 10% will be contributed by the SPV with max project costs up to Rs 5 crore.

Gujarat Mini Cluster Development Scheme³⁵

The scheme spans a 10-year duration, providing support of up to 80% or 90% of the project, with a maximum limit of Rs 4.0 or 4.5 crore

Kerala State Sponsored CDP³⁴

Maximum project cost of the cluster - Rs 5 crore
The consortium will contribute 20% of the project cost, while the Government of Kerala will provide a grant covering the remaining 80%

Maharashtra State Industrial CDP³⁶

The Government of Maharashtra will provide up to 70% grant for establishing CFCs, capped at Rs 5 crore

Micro and small enterprises cluster development program (MSE-CDP)³⁶

The scheme aims to enhance the productivity and competitiveness of MSEs by extending government grants for establishing CFCs in existing clusters and setting up new clusters or upgrading existing industrial areas/estates/flatted factory complexes.

Financial assistance provided under this programme ranges from Rs 5 crore to Rs 30 crore through the MSE-CDP.

The government approved 557 projects under the scheme at a cost of Rs 1,074 crore as of fiscal 2023. Notably, small enterprises account for 30% of these projects and micro-enterprises for 70%.

Figure 6

By January 1, 2023, MSE-CDP had a revised budget estimate of Rs 120 crore, but only Rs 79 crore had been utilised.

³² Haryana State Mini Cluster Development Scheme

³³ Kerala-State Sponsored Cluster Development Programme

³⁴ Gujarat mini cluster development scheme

³⁵ Maharashtra State Industrial Cluster Development Programme

³⁶ Ministry of MSME, 2023, MSE-CDP

Progress of MSE–CDP³⁷

MSME-CDP has achieved notable milestones in India – completed 92 CFCs and 200 infrastructure development projects as of December 2023. States like Maharashtra, Tamil Nadu and Uttar Pradesh have demonstrated active participation with a considerable number of projects, focusing on cluster-based needs. However, about 20 states lag with slow progress in cluster development in these regions, with fewer than two CFCs or infrastructure development projects.

Figure 7

³⁸ Ministry of MSME, State-wise Projects Under MSE-CDP

Scheme of Fund for Regeneration of Traditional Industries (SFURTI)³⁹

The scheme facilitates the establishment of collective manufacturing enterprises for artisans to boost their production and enable the creation of value-added products, thereby enhancing the marketability of their goods.

With a higher concentration of traditional industrial clusters, states like Odisha, Uttar Pradesh and Madhya Pradesh have shown significant efforts in establishing multiple clusters to empower the artisans and have focused on developing and modernising the traditional industries.

Under the scheme, 513 projects at a cost of Rs 1,447 crore had been approved as of fiscal 2023. Further, government grants of Rs 1,336 crore have been provided to seven sectors and 511 clusters, directly benefiting 298,580 artisans.

Figure 8 Budget allocated under SFURTI

(Rs crore)

³⁹ Ministry of MSME, 2023, SFURTI

One District One Product ODOP ⁴⁰

The ODOP scheme facilitates the growth of local industries, crafts and traditional products at the district level. Under this programme, each district identifies and emphasises the promotion and development of a specific product that is unique to the region and holds potential for growth and market demand. The states and union territories are responsible for choosing these products, considering the distinctive features of the local environment.

Figure 9: ODOP initiative coverage as of September 2022

Source: Ministry of Food Processing Industries

The mango festival organised in Japan is an example of the ODOP initiative. It showcased a variety of mangoes from states such as Andhra Pradesh, Gujarat, Maharashtra and Telangana. It is a collaborative effort with the Embassy of India, Tokyo.

SIDBI Cluster Development Fund (SCDF)⁴¹

The fund supports industries, community projects near clusters, and connectivity improvements. It is offered to state governments as a 7-year soft loan. The Reserve Bank of India allocated Rs 6,990 crore to Small Industries Development Bank of India (SIDBI) for MSME cluster development in fiscal 2022, establishing a dedicated division for this purpose. During the fiscal, SIDBI created a special division dedicated to developing MSME clusters.

As per latest available data as of March 2022, financial aid had been approved for 37 projects (34 greenfield and three brownfield projects) across five states, totalling Rs 1,038 crore. Further, Rs 180 crore was disbursed for 22 projects under the SCDF initiative.

⁴⁰ Ministry of Food Processing Industries, 2022, ODOP

⁴¹ SIDBI MSME Cluster Development

Way forward

Promotion of cluster brand identity⁴²

Establishing a brand for a cluster based on its specialisation can yield several advantages. Marketing the cluster's specialised products along with effective branding and packaging not only enhances its position in the domestic market but also opens doors for export opportunities.

A notable instance of successful brand identity is the Kannauj (UP) cluster, traditionally renowned for attar, a traditional oil-based perfume. However, in contemporary times, the product struggled to attract a sufficient consumer base. With government support and improved brand communication and presentation, the weekly sales for this cluster witnessed a remarkable increase of 96%.

Promoting sustainable development and addressing environmental concerns while fostering cluster development⁴³

The idea of promoting sustainable development within industrial clusters is gaining momentum. Environment-friendly practices need to be integrated when addressing cluster-specific demands.

One such example is the Boaco and Chontales cluster in Nicaragua, which emphasises institutional networking as mentioned in UNIDO's cluster approach.

Sector – cluster approach for financial lending⁴⁴

Financial institutions, along with banks, play a crucial role in the advancement of MSME clusters. Introducing innovative credit support and customized term loan schemes specific to the needs of these clusters, can empower MSMEs to maximise the opportunities arising from cluster development.

According to an ADB report, a more practical lending approach by banks and financial institutions is recommended when dealing with MSMEs, taking into account their distinct needs and challenges.

Theme based models for cluster formations⁴⁵

The concept of theme-based clusters emphasises creating clusters that revolve around a particular theme or industry specialisation such as technology, manufacturing, agriculture, tourism, healthcare and renewable energy. Clusters have the opportunity to align themselves with the expertise of the enterprises/business within the cluster and foster connections with other clusters, serving as a platform for knowledge exchange, skill development, and technology transfer. As a result, this enhances the overall competitiveness of the businesses involved.

As per a UNIDO cluster development (FMC) report, some of the cluster interventions followed the flagship theme approach and have achieved commendable results.
