Sector at a glance

Technological advancements

The **'Sector-at-a-Glance'** provides an easy-to-read overview and basic understanding of a sector, sub-sector, or thematic area. The facts and insights on the sector are supported by relevant data and best practices from credible government and multilateral sources. The document covers the structure, key trends, opportunities and challenges, government initiatives, and the way forward for the sector.

Overview

Technological advancement is critical for micro, small and medium enterprises (MSMEs) as they compete with larger businesses, many of which have the latest technology, giving them a competitive advantage. Using the latest technologies, smaller companies can transform the way they operate. It can improve their communication with customers, management of inventory and the end-to-end production process. It can also enable them to connect with new markets and vendor partners.

The government has initiated several measures to bolster tech upgrade among MSMEs. These include schemes such as Digital MSME, which encourages digital transformation and establishment of industry-specific technology centres. Moreover, there is a growing emphasis on green initiatives and collaborative efforts for tech improvement. These initiatives collectively empower MSMEs to adopt modern technologies, innovate and enhance their competitiveness in the market.

Driving growth through technology upgrades for MSMEs

Promoting technology upgrades for MSMEs yields a host of advantages. Enhanced productivity and elevated product quality directly contribute to heightened competitiveness in the market. The process of upgrading not only results in energy savings, positively impacting costs, but also aligns with environmental objectives by reducing emissions. This dual-benefit approach underscores the importance of technological advancement in fostering both economic growth sustainable business practices and increasing global competitiveness.

Innovation in Indian MSMEs

In the pursuit of technology upgradation, fostering innovation became imperative for Indian MSMEs to overcome barriers, amplifying their capacity for growth, resilience, and global competitiveness. As per the National Manufacturing Innovation Survey 2021-22¹, for MSMEs, innovation entails varied dimensions spanning across input activities, internal firm capabilities, and knowledge flows in the ecosystem. It encompasses preparing for and implementing innovations and distinguishing between innovative and non-innovative firms based on their success in introducing new ideas. Additionally, innovation extends beyond technology to encompass business models, processes, and products.

As per World Bank estimates, India spent around 0.66% of its gross domestic product (GDP) on research and development (R&D) in 2023, while the world average was around 2.63%.² The National Manufacturing Innovation Survey 2021-22 indicated a mere 25% of the surveyed MSMEs in the country were 'innovative'. This lack of innovation hampers their ability to introduce new or improved products and processes.

The survey revealed that among firms engaging in innovations, a significant majority experienced increased turnover, discovered new market opportunities, and responded effectively to market and cost pressures. This creates a compelling business case for innovation in manufacturing.

Due to limited financial resources and operational capacities, many MSMEs find it challenging to invest in R&D, which, in turn, restricts their adoption of advanced technologies. Small firms, in particular, face the highest barriers to innovation, further limiting their potential for tech upgrade.

¹ Department of Science and Technology, 2023, The National Manufacturing Innovation Survey

² World Bank, 2023, Research and development expenditure (% of GDP) – India

Figure 1: Innovation in MSMEs

Note: Percentage is of the sample set considered for each segment

Innovators implement either new or significantly improved products or processes (marketing and sales, procurement, or other organisational methods in their business practices).

Product innovators introduce new or improved goods or services, while process innovators enhance business operations across multiple functions, such as operations, marketing, procurement, logistics and administration.

The firm-level survey targeted 10,139 firms through a stratified random sample, representing businesses from 28 states and six union territories. It covered 54 NIC manufacturing and related service sectors, encompassing micro, small, medium-sized and large groups.

Technological transformation for Indian MSMEs

Indian MSMEs can enhance efficiency, sustainability, and global competitiveness by focusing on improvement in their operations, environmental practises, and digitisation.

		
Adoption of latest machinery Efficiency improvement, faster production, and global competitiveness through the integration of modern machinery	Cleantech initiatives Environmental alignment, reduced emissions, and sustainable practices via clean technologies	Digitisation drive Operational streamlining, enhanced data management and market access empowerment through digitisation

MSME technological advancement: Adoption of latest machinery

Adoption of modern machinery is vital for enhancing efficiency, accelerating production and fostering global competitiveness. Upgrading equipment ensures streamlined operations, reduces manual effort and enhances precision, addressing the need for increased productivity and competitiveness in today's dynamic markets.

Introduction of CNC machines in metal fabrication MSME unit

In a metal fabrication MSME based in Guntur³, introduction of advanced computer numerical control (CNC) machines marked a notable advancement for the business. However, challenges surfaced in nearby cluster firms relying on basic gas cutting tools, resulting in inaccuracies and human errors. Recognising this issue, a proposal was made to establish a shared facility equipped with horizontal metal cutting band saws and CNC plasma cutting tools. This initiative aims to bridge critical technology gaps and enhance precision in sheet cutting across the cluster.

³ Small Industries Development Bank of India, 2021, Steel Fabrication Cluster in Guntur
Sector at a glance - Technological advancements

Technology centres driving technology upgradation in MSMEs

Infrastructure development and capacity building play a pivotal role in the growth of the MSME sector, particularly in tool engineering and skill development. Tool rooms have significantly contributed to skill enhancement and identification of tooling requirements.

Technology centres play a crucial role in the technology upgrade of MSMEs by offering specialised training, facilitating international collaborations, and providing expertise in tool engineering. They actively contribute to the development of skills, advancement of precision tooling and adoption of advanced technologies.

Over the past nine years, technology centres have been pivotal in nurturing MSME growth, equipping trainees and benefitting numerous units. With 18 operational and a proposal for 15 new centres, they drive essential tech upgrades and skill development.

Technology centres played a crucial role during the Covid-19 pandemic by manufacturing essential items such as multi-cavity molds and sanitiser pumps.⁴ Notably, Bhubaneswar Tool Room, under the Ministry of MSME, manufactured over 54,000 aerospace components for various missions. Similarly, Institute for Design of Electrical Measuring Instruments (IDEMI) Mumbai played a vital role by providing components for Chandrayaan-3.⁵ This highlights their significant contribution to national initiatives.

			
18 Current technology centres and technical institutions set up	16,00,000+ Trainees	3,00,000+ Units benefited	15 / 100 Proposal for establishment of new technology centres / extension centres

Note: Data is for fiscal 2014-2023⁶

⁴ Ministry of Micro, Small & Medium Enterprises, 2020, MSME Ministry to tackle COVID-19 challenge

⁵ Ministry of Micro, Small & Medium Enterprises, 2023, MSME sector played an important role in the success of Chandrayaan-3

⁶ Press Information Bureau, 2023, Technology Centres in the Country

Technology Centres across locations in India

In India, 18 operational technology centres provide diverse sector support, including General Engineering (Aerospace, Precision Components), Auto Parts, Electronics, Foundry, and Footwear.

Figure 2:

Technology centres have designed specialised training programmes that cater to international participants sponsored by the Government of India through agreements such as the Technical Cooperation Scheme (TCS) of Colombo, Special Commonwealth African Assistance Programme (SCAAP), Indian Technical and Economic Cooperation (ITEC) and Aid to Sri Lanka. These programmes cover areas such as tool design, manufacture, low-cost automation, and C/AD/CAM, facilitating skill development and knowledge exchange at an international level.

Elevating Indian MSMEs: Cleantech initiatives

India's MSME sector, operating within approximately 200 energy-intensive manufacturing clusters, is responsible for generating approximately 110 million tonne of CO₂ equivalent annually, with an annual energy consumption of 50 million metric tonne of oil⁷ in 2018. These clusters, dispersed across the country, specialise in industries such as textiles, brick manufacturing, hand tools, metal castings, forging and pump production. Given their substantial energy consumption, it is crucial for these enterprises to adopt measures that enhance efficiency and integrate clean energy technologies.

Solar rooftops⁸

Incorporating solar energy and technological advancements can enhance the Zero Effect Zero Defect (ZED) scores of MSMEs by reducing carbon emissions and enabling access to government grants and subsidies. The ZED score aids MSMEs by evaluating and promoting zero defects, minimizing environmental impact, enhancing sustainability, attracting subsidies, reducing costs through solar and technological integration, and ensuring an uninterrupted power supply.

Solar rooftops, coupled with technology upgrades, trim electricity expenses and overall costs, guaranteeing an uninterrupted power supply, unlike coal-generated electricity.

India has witnessed growth in solar installations, especially in ground-mounted spaces. However, accelerating the expansion of Grid Connected Rooftop Solar PV (GRPV) installations is crucial. The Ministry of New and Renewable Energy's (MNRE) Phase-II plan aims to incentivize rooftop solar uptake. As of March 2019, India has installed 31.5 gigawatts (GW) of solar PV, with GRPV contributing 4.4 GW.

Bureau of Energy Efficiency (BEE)⁹

The BEE-SME scheme is part of national programmes focused on energy efficiency and technological enhancements for SMEs. The Global Environmental Benefits-United Nations Industrial Development Organization-BEE scheme supports energy and renewable energy adoption in selected MSME clusters across India by financing the implementation of energy-efficient products.

MSMEs and digital empowerment

Data has become pivotal to business intelligence. Realising this, SMEs globally are rapidly embracing digital tools and networks to foster innovation. They are upgrading their technology and leveraging cloud to promote innovation and growth on a global scale.

According to a report by the Organisation for Economic Co-operation and Development (OECD)¹⁰, there has been a significant uptake of digital platforms in the past few years, with more than 60% of the business population using social media in 2021. Over the past six years, the adoption of cloud computing by SMEs has doubled, reaching levels comparable with large firms.

Figure 4: Business using social media globally

Source: OECD report, 2023¹¹ According to the India Brand Equity Foundation and MSME Annual Report 2023¹¹, more than 50% of MSMEs in India are located in resource-scarce rural areas, underscoring the criticality of technology solutions to their businesses. They face challenges such as limited internet access, insufficient capital, and lack of technology and innovation. However, it is crucial they adopt technology solutions to meet their specific needs.

A survey conducted by Endurance International Group in 2020¹² revealed that 30% of MSMEs in the country had already ventured into the online space through business websites or collaborations with e-commerce platforms. Additionally, more than 50% had adopted video conferencing tools to ensure business continuity during the pandemic.

According to the Cisco India SMB Digital Maturity Study¹³ 2020, if companies embrace digital technologies, they could contribute a substantial \$158-216 billion to India's GDP by 2024. The thriving technology start-up ecosystem, supported by favourable government policies and an ever-growing consumer base, brightens the outlook for the integration of technology-based solutions in the MSME sector.

Empowering MSMEs through digital innovation

Open Credit Enablement Network (OCEN)¹⁴

OCEN is reshaping the landscape of MSMEs' access to funding through its integration with digital lending platforms. These platforms leverage technology and innovative scoring techniques to streamline credit processes, making them more efficient and accessible.

OCEN facilitates the secure sharing of financial data, significantly enhancing resource acquisition for MSMEs. By bridging the gap between lenders and small businesses, OCEN promotes financial inclusion and empowers MSMEs to secure the funding they need for growth and expansion.

Open Network for Digital Commerce (ONDC)¹⁵

ONDC, a government-led initiative, empowers India's e-commerce ecosystem with a decentralised approach. It is a community-driven network promoting inclusivity, supporting local businesses and empowering MSMEs. By allowing MSMEs to list products and gain visibility, ONDC promotes hyperlocal delivery, encourages competition and reduces costs, fostering a more accessible e-commerce landscape.

The ONDC network has a live presence in 273 cities, with 47 active network participants, and it boasts a network of over 50,000 sellers as of October 2023.

¹⁴ Open Credit Enablement Network, 2023, About Us

¹⁵ Open Network for Digital Commerce, 2023, About Us

Challenges and opportunities

Major challenges

	Financial constraints MSMEs struggle to allocate funds for marketing, technology and distribution enhancements due to financial constraints. Consequently, they encounter difficulties in penetrating markets, which undermines their competitive edge and hampers their potential for expansion. According to an Asian Development Bank (ADB) survey report¹⁶, over 87% of innovative small and midsize firms identify a shortage of funds, both internally and externally, as a major hurdle to innovation and tech upgrade. In India, SMEs grapple with a complex financial challenge: the high cost of innovation, coupled with insufficient internal resources, hinders implementation. Additionally, limited access to external finance exacerbates these financial bottlenecks, forming a challenging cycle for SMEs in pursuit of innovation.
	Lack of awareness and expertise India's vast MSME sector predominantly comprises microenterprises, with ~51% located in rural areas. A significant portion remains unaware of the advantages of technology upgrades and lacks the expertise to implement suitable solutions, leading to a preference for traditional methods and hindering technological progress. According to an ADB report¹⁷, lack of awareness and expertise is one of the major pain points for MSMEs in upgradation. A study by the World Bank¹⁸ found that MSMEs that use digital financial services can increase their access to finance by up to 50%.
	Limited R&D capabilities Limited R&D capability is a major challenge MSMEs face in their pursuit of technology upgradation. It hampers their ability to innovate and embrace modern technologies, which, in turn, affects their competitiveness. As a result, these businesses lag in a rapidly evolving market. According to an ADB report¹⁹, slow growth of SMEs can be attributed to factors such as the lack of a comprehensive database and low R&D expenditure.

¹⁶ Asian Development Bank, 2016, Barriers to Innovation in Indian Small and Medium-Sized Enterprises

¹⁷ Asian Development Bank, 2016, Barriers to Innovation in Indian Small and Medium-Sized Enterprises

¹⁸ International Finance Corporation, 2019, Supply Chain Finance

¹⁹ Asian Development Bank, 2016, Major Challenges Facing SMEs in Asia and Solutions for Mitigating Them

Infrastructure challenges

Inadequate physical infrastructure, such as lack of reliable power supply, poor internet connectivity and difficulties in transportation, hampers the adoption and utilisation of advanced technologies. Without a suitable infrastructure (both hard and soft), MSMEs struggle to implement and maintain modern technological solutions effectively.

According to the Report of the Expert Committee in 2022²⁰, MSMEs in rural areas suffer disadvantages in the form of higher logistics cost, limited market access, lack of knowledge and uneven connectivity.

Indian MSMEs can learn from Shenzhen's success²¹ by prioritising infrastructure development, fostering a business-friendly atmosphere and embracing institutional innovation. Investments in transportation networks and urban environments can attract talent and businesses. India should also streamline administrative processes and create an environment that encourages innovation while tolerating certain failures. This approach will enhance the growth and competitiveness of its MSME clusters. This holistic approach inspired by Shenzhen, is pivotal for the technological advancements on Indian MSMEs.

²⁰ Reserve bank of India, 2019, Report of the Expert Committee

²¹ The World Bank, Building Engines for Growth and Competitiveness in China

Opportunities

While MSMEs in India encounter significant hurdles in adopting advanced technologies, they have the potential to chart a promising path forward. Embracing digital payment systems, establishing an online presence for broader market reach, and implementing green initiatives such as solar energy projects offer avenues for growth and sustainability in an evolving business landscape.

	Enhanced efficiency Adopting modern technologies such as automation, the Internet of Things and cloud computing can improve operational efficiency, reduce production costs, and streamline supply-chain management, leading to higher profitability. According to an OECD report²², of late there has been a significant uptake of digital platforms, with more than 60% of the business population using social media in 2021. Over the past six years, the adoption of cloud computing by SMEs has doubled, reaching a level similar to that of large firms.
	Market expansion Technological upgrades enable MSMEs to reach a wider customer base, both domestically and internationally, through e-commerce platforms and digital marketing. This expansion into new markets can significantly boost sales and revenue. The German Mittelstand²³ is a lesson for Indian MSMEs to enhance market access. The German Ministry for SMEs played a pivotal role by creating a pro-innovation environment, offering market-driven funding programs, and establishing the Central Innovation Programme (ZIM) to grant financial support for technology-focused research and development. As a result, the Mittelstand's commitment to innovation, and quality-driven ethos have enabled approximately 44% of German SMEs to export their products globally, contributing to the nation's economy.
	Access to data-driven insights Technology allows MSMEs to collect and analyse data more effectively. This data-driven approach can provide valuable insights into customer behaviour, market trends and operational performance, enabling informed decision-making and strategic planning. According to a World Trade Organization report²⁴, data-driven solutions empower firms to embrace novel approaches in market access. For instance, Malaysia's Fintech Booster programme²⁵ integrates predictive analytics and machine learning to enhance MSME credit underwriting and trains MSMEs in legal compliance, business modelling, and technology through resources and mentorship programs. This data-driven approach has improved credit accessibility and offers valuable insights to develop Indian MSMEs.

DRAFT

Government interventions

Recognizing the challenges MSMEs encounter in adopting modern technologies, the government endeavours to provide crucial financial incentives and implement policies fostering technology upgrades. The MSME Champions scheme (erstwhile Credit Linked Capital Subsidy - Technology Upgradation Scheme) consolidates six components namely ZED, Lean, Incubator, Design, IPR and Digital MSME from the previous Technology Upgradation Scheme. Stretched over a 5-year term (2021-22 to 2025-26), this initiative takes a holistic approach, synergizing interventions to modernize processes, boost competitiveness, and fortify the enterprises' national and global standing. This strategic alignment seeks to address barriers faced by MSMEs, allowing them to navigate and thrive in an ever-evolving business landscape.

Figure 5: Technology Upgradation (Rs crore)

Note: The allocation includes the Technology Upgradation and Quality Certification, Tool Rooms & Technical Institutions, Establishment of New Technology Centres and Technology Centre Systems Programme (TCSP)

Source: Budget documents²⁶

Major policies and schemes²⁷

MSME Sustainable (ZED)

The ZED Certification scheme promotes technology upgradation among MSMEs with a focus on zero defect and zero effect principles. It enhances productivity, reduces wastage and optimises resource usage. The government had allocated Rs 14 crore for this scheme as of December 31, 2022, to boost MSME global competitiveness and sustainability.

MSME Innovative (Incubation)

The scheme encourages innovation in manufacturing and knowledge-based MSMEs by promoting the adoption of advanced technologies. It aims to boost technological capabilities, productivity and innovation. As of December 31, 2022, the government had allocated Rs 21 crore for this scheme.

²⁶ Government of India, 2023-2024, India Budget, 2023-24

²⁷ Ministry of MSME, 2023, Annual Report

MSME Innovative (Design)

The MSME Innovative (Design) initiative targets the shortage of design expertise in domestic manufacturing. It provides a platform for collaboration between designers and manufacturers, offering real-time expert advice and cost-effective solutions for design challenges. As of December 31, 2022, the government had allocated Rs 3.6 crore for this initiative.

MSME Innovative (IPR)

The scheme focuses on raising awareness about intellectual property rights among MSMEs, safeguarding their ideas and innovations. It enables the commercialisation of the innovative concepts of small firms, with an expenditure of Rs 4.4 crore as of December 31, 2022.

MSME Innovative (Digital)

The Digital MSME scheme promotes digitisation to boost competitiveness. It empowers MSMEs with digital tools and technologies. However, as of December 31, 2022, no expenditure was reported for this scheme.

MSME Competitive (Lean)

The MSME Competitive (Lean) scheme enhances sector competitiveness through lean methodologies. As of December 31, 2022, the government incurred an expenditure of Rs 2.3 crore on this initiative.

Amended Technology Upgradation Fund Scheme (ATUFS)

ATUFS²⁸ is a credit-linked subsidy programme implemented from 2016 to 2022, with an aim to modernise the textile industry by encouraging capital investments, enhancing quality and promoting 'Make in India' with a focus on zero defect and zero effect manufacturing.

Pradhan Mantri Formalisation of Micro food processing Enterprises (PMFME)

The PMFME²⁹ scheme, with a Rs 10,000 crore outlay over fiscals 2021-25, offers financial, technical and business support to establish or upgrade 2 lakh micro food processing enterprises. Currently, 38,466 enterprises have received approval for assistance.

Indian Footwear and Leather Development Programme (IFLDP)

The Sustainable Technology and Environmental Promotion (STEP)³⁰ scheme, a component of IFLDP, provides assistance for common effluent treatment plants (CETPs). It offers up to 80% of the project cost in the North East region and 70% in other regions, with a maximum limit of Rs 200 crore per CETP project.

²⁸ Press Information Bureau, 2020, Encouragement to Research and Innovation in Textile Sector

²⁹ Press Information Bureau, 2023, Food Processing Industry Schemes In Rural Areas

³⁰ Press Information Bureau, 2022, Indian Footwear and Leather Development Programme

Way forward

	Establishment of industry-specific technology centres Establishing product-specific technology centres can empower MSMEs with specialised knowledge, cutting-edge technologies and hands-on training. These centres foster innovation, modernise operations and enhance competitiveness, enabling MSMEs to navigate the evolving business landscape and thrive in their industries. The Ministry of MSME has set up 18 technology centres³¹ nationwide in sectors. These centres provide training, advisory support and access to advanced manufacturing technologies for MSMEs across sectors such as plastics, auto parts, electrical, electronics, forging and leather, fostering innovation and competitiveness. As part of the forward-looking Technology Centre Systems Programme (TCSP)³², 15 new centers are underway, expanding the network to 33 TCs. To enhance accessibility, the Cabinet Committee on Economic Affairs (CCEA) approved the "Establishment of New Technology Centres/Extension Centres" scheme, paving the way for 20 new TCs and 100 Extension Centres. This strategic initiative aims to amplify the impact and reach of technology support for broader industrial development.
	Technology upgradation collaboration Strengthening and synergising incubation schemes from multiple government departments, such as the Ministry of MSMEs, biotechnology, NITI Aayog, DST and state governments. Establishing a joint working group on incubation schemes can facilitate collaboration, resource-sharing, and exchange of expertise. This approach will empower MSMEs with innovation, funding, and support, fostering growth in the sector and driving overall economic and technological progress. The collaboration of government bodies such as the Ministry of MSME, NITI Aayog, and the Department of Science & Technology led to initiatives like the Technology Business Incubator (TBI) programme. TBIs across India, with IIT Bombay's SINE³³ as a case in point, support technology upgradation and innovation among MSMEs through funding, mentorship, and infrastructure, fostering economic and technological growth.

Digital upgrade & E-commerce collaborations

Digital upgrade offers a significant advantage for MSMEs by streamlining operations and expanding market reach. By adopting digital payment systems, transactions become more efficient, reducing manual processes and enhancing financial management. Embracing e-commerce platforms opens up opportunities to access a broader customer base, including global markets. Furthermore, establishing an online presence enables effective marketing and boosts brand visibility, aiding MSMEs to compete effectively in the digital age.

From November 2019 to November 2023, UPI transactions surged at a Compound Annual Growth Rate (CAGR) of 97%³⁴, reaching 11,235 million transactions in Nov-23, showcasing substantial growth. This surge has presented MSMEs with a valuable opportunity.

E-commerce provides MSMEs with a path for digital advancement, facilitating broader market reach and streamlined operations, and fostering growth and competitiveness in the evolving business landscape.³⁵

MSMEs in sectors such as textile, handloom and handicrafts can benefit from partnerships with e-commerce giants such as Amazon, Flipkart³⁶ and eBay. These partnerships, established through MOUs, offer assistance with onboarding, cataloguing, marketing, account management, business insights and warehousing support.
