SECTOR AT A GLANCE

Food processing

Manufacturing in India

DRAFT

Sector at a glance

Food processing

Manufacturing

The '**Sector-at-a-Glance**' provides an easy-to-read overview and basic understanding of a sector, sub-sector, or thematic area. The facts and insights on the sector are supported by relevant data and best practices from credible government and multilateral sources. The document covers the structure, key trends, opportunities and challenges, government initiatives, and the way forward for the sector.

Overview

India is the world's second largest food producer, next only to China. However, the country has the potential of surpassing China, given its arable land of 36 million hectares¹ is more than China's. Also supporting the trajectory is an uptrend in demand for processed food.

To be sure, food processing is one of the largest manufacturing industries in India, in terms of production, consumption as well as employment generation², with the industry having grown at a healthy 9% CAGR over fiscals 2018 to 2023. In fact, the ready-to-cook and ready-to-eat sub-segment, which consists of biscuits, cakes, breakfast mixes and instant foods, grew a faster 13-14% CAGR.

Rising disposable income, changing lifestyles and increased participation of women in the formal workforce have supported the demand for processed foods.

Sector snapshot

But of the ~25 lakh processing units in India (as of fiscal 2021)³, only ~40,000 are registered and follow regulatory norms. Still, the organised segment dominates the space in value terms, comprising ~70% share of the total output of the industry.

This is because organised players command exponentially higher realisation, owing to their superior product quality and increased level of processing.

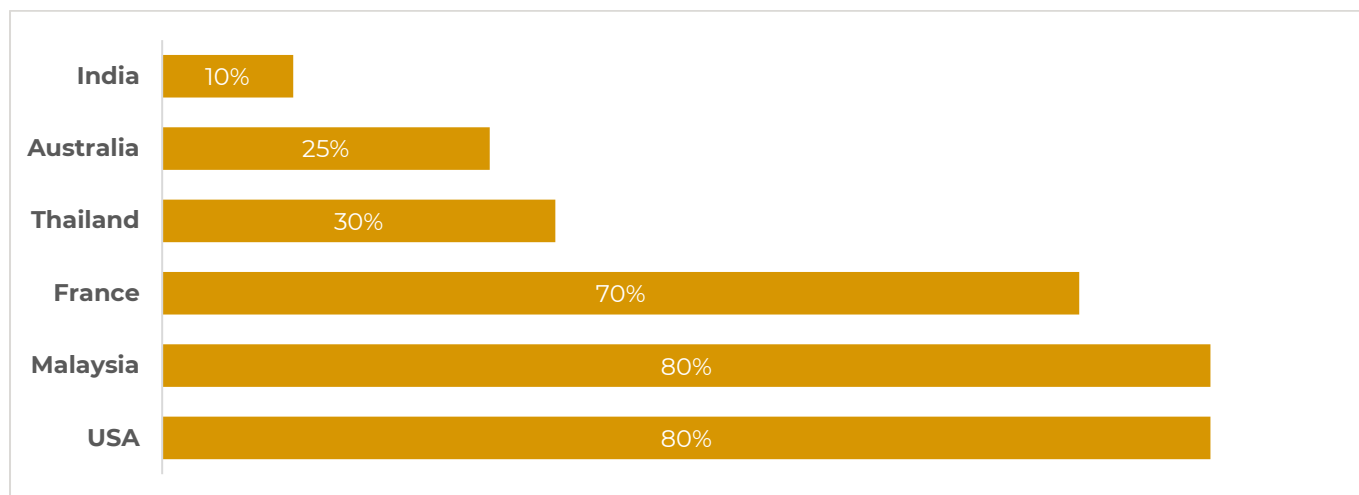

Processing levels low despite India being second largest food producer

India lags in food processing despite abundant availability of agricultural commodities. The key reasons are:

- Limited farm-gate infrastructure for sorting, grading and packing
- Supply chain gap between farmers and food processors
- Preference for fresh produce over processed food among consumers
- Limited ability of majority of the populace to pay a premium for processed food products

³ Ministry of Food Processing

Figure 1: Processing level of perishable food commodities

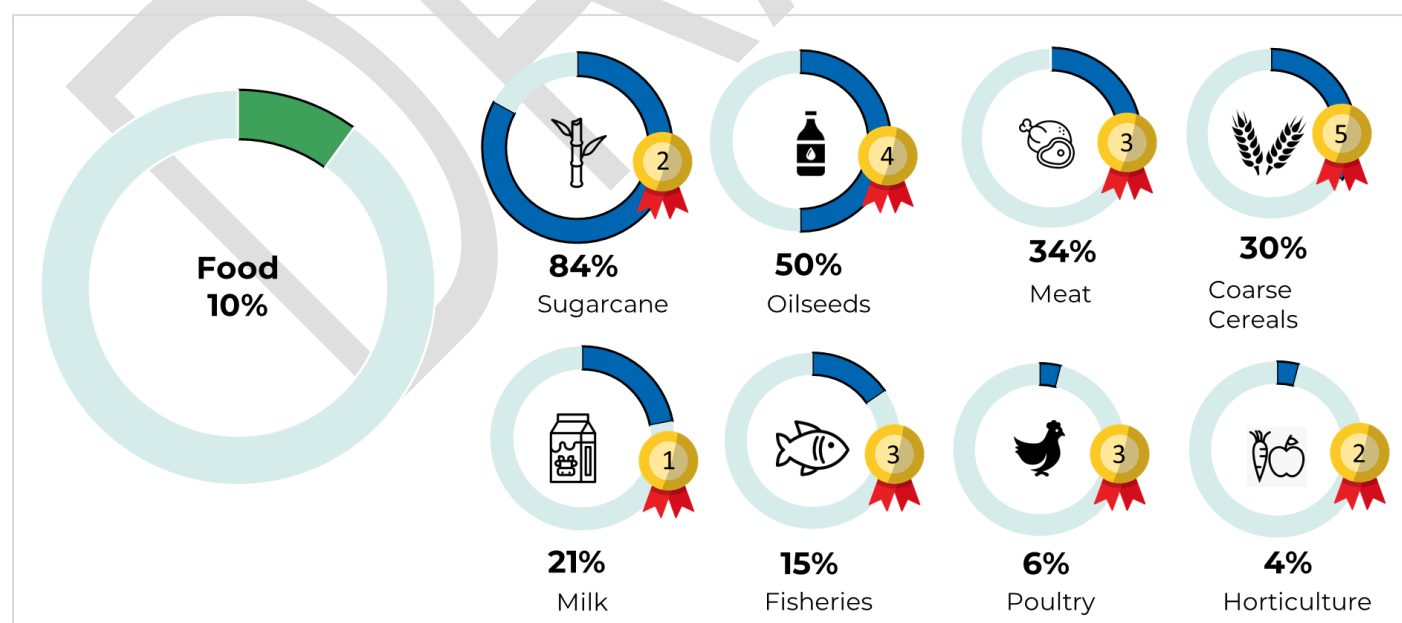

Source: Annual report of the Ministry of Food Processing Industries 2017-18, Study to determine the level of Food Processing in India, Deloitte - July 2021

Processing of sugarcane highest; processing level of rest of the categories low

The sugarcane industry in India is highly organised and regulated, and, hence, there is extensive processing of sugarcane. Growing demand for its by-products, such as molasses and bagasse, has diverted 84% of the production into the formal processing channel.

In the case of coarse cereals, though, the highly fragmented nature and dominance of unorganised units has limited processing. Preference for freshness, and lower demand for processed poultry, seafood and horticulture products have kept the segments' processing share low as well.

Figure 2: Extent of processing across food categories**

Rank in world production

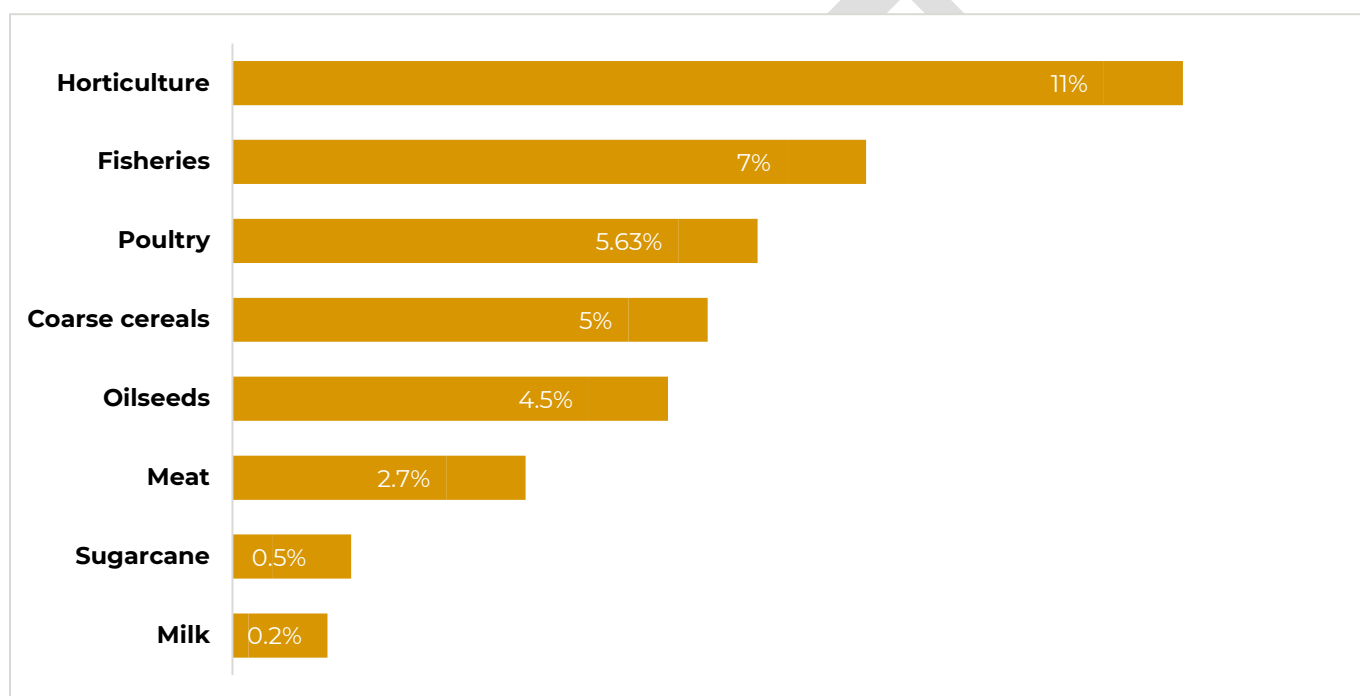

** State-wise extent of food processing is given in Annexure 1

Source: Annual report of the Ministry of Food Processing Industries 2022-23, Study to determine the level of Food Processing in India, Deloitte- July 2021

In fact, the consumption pattern of Indians leans towards fresh food over processed food, especially in the case of animal-based and horticulture products. For e.g., annually, ~45% of the milk produced is consumed at the farmer level in its raw form⁴, with the remaining marketed to dairy processors. This is because of preference for fresh milk over processed milk.

A similar trend is in the horticulture segment, where Indian consumers prefer to consume fruits and vegetables in raw form rather than processed form. But **lack of primary processing and cold storage units** lead to **high wastage**. Indeed, the shelf life of these products can be increased through primary processing or storing in cold storages.

Figure 3: Food wastage highest in horticulture

⁴ Addressing Systemic issues in Animal Husbandry through Private Participation, Boston Consulting Group, July 2020

10 states account for bulk of food processed

Only 10 states (Haryana, Rajasthan, Uttar Pradesh, West Bengal, Madhya Pradesh, Gujarat, Maharashtra, Karnataka, Andhra Pradesh, and Tamil Nadu) comprised 80%⁵ of the total food products processed in value terms in fiscal 2020. To increase the penetration of food processing units in other states, the government has introduced policies to encourage the setting up of food parks, thereby also providing players access to advanced machinery, supply chain linkages and avenues to sell.

⁵ Annual Survey of Industries 2019-20

Food Parks

Sector trends

Figure 4: Animal-based products and edible oils driving food processing industry

Note: Estimation done by CRISIL Market Intelligence and Analytics

Methodology: Each food sector has been sized with the help of primary and secondary research. Industry stakeholders like large companies, industry associations, manufacturers, and traders were contacted to gather insights regarding volumes and prices of the industry as part of primary research. Government documents, press releases and company reports have been referred to as part of secondary research.

Favourable demographics, such as steadily growing population and increasing disposable income, are driving the food processing industry. Increasing need for convenience and changing lifestyles are pushing consumers towards consumption of processed foods, especially value-added dairy products and other animal-based products that typically require preparation before consumption. Further, growth of organised retail and launch of new product varieties by food manufacturers have made processed food easily available and attractive.

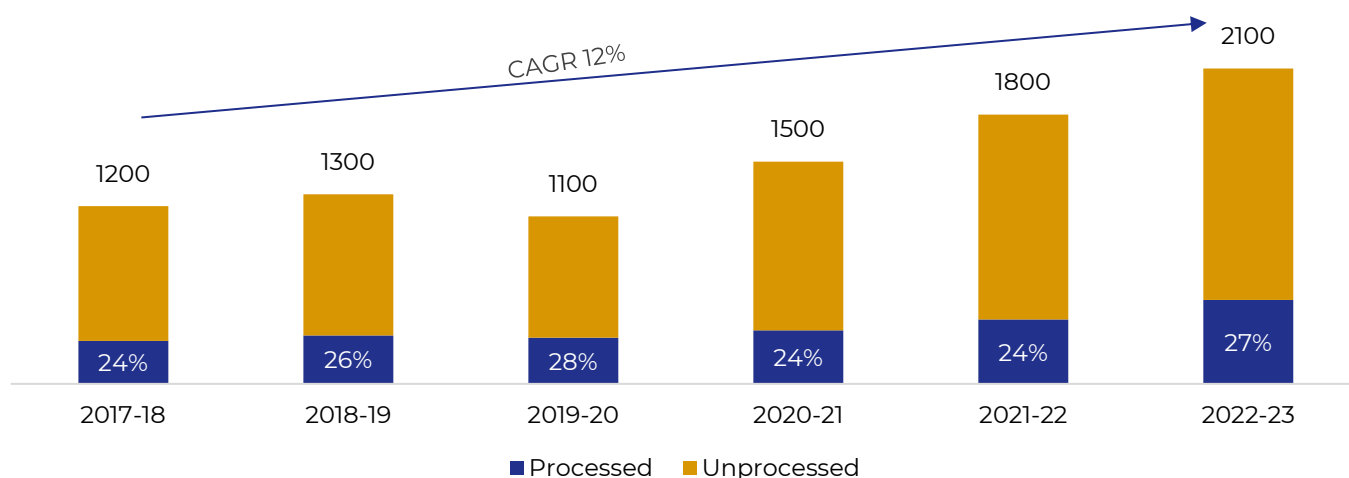

The food grain, milk and horticulture sectors steadily rose at 6-9% CAGR over fiscal years 2018 to 2023, owing to domestic consumption and their ubiquitous nature.

Marine products and edible oils grew at a faster pace, rising 10-12% CAGR. The growth in marine products has been because of increasing availability of marine preparations in the hotel, restaurant, and cafe industry. The rise in edible oils has been via indirect consumption by consumers through processed food products, such as ready-to-cook meals.

Poultry and meat sectors posted a sharper 15% CAGR, with the share of population consuming non-vegetarian food increasing steadily.

Figure 5: Exports rising with government push; export of processed food remains low

Rs crore

Source: Agricultural and Processed Food Products Export Development Authority, CRISIL MI&A Research

The rise in the export of food products is the outcome of various initiatives taken by the government, such as organising business-to-business exhibitions in several countries and exploring potential markets through product-specific and general marketing campaigns with the involvement of Indian embassies.

Several initiatives have also been taken to promote products having registered geographical indications in India and organising virtual buyer-seller meetings on agricultural and food products with UAE counterparts and handicrafts with US players.

Further, private players have installed new technologies for processing and are developing products suitable to the growing Westernisation in food habits, as well as for exports.

India's export position across key food products

India leads in the export of rice, sugar and meat, while it lags in the export of fresh fruits and dairy products. Low processing and lack of cold chain storage units contribute to lower export of perishable commodities, such as fruits and dairy products.

Table 1: Key exporting commodities from India

	India's export as of FY23 (Rs. Crores)	India's rank in exports	Top 3 countries in exports
Rice	89,61,292	1	India, Thailand, Vietnam
Sugar	46,30,942	2	Brazil, India, Thailand
Bovine meat	25,63,986	2	Brazil, India, USA
Fisheries	64,90,213	6	USA, China, European Union
Wheat	11,82,690	14	Russia, European Union, Canada
Fresh Fruits	69,67,23	15	European Union, China, USA
Dairy Products	4,70,916	17	USA, European Union, New Zealand

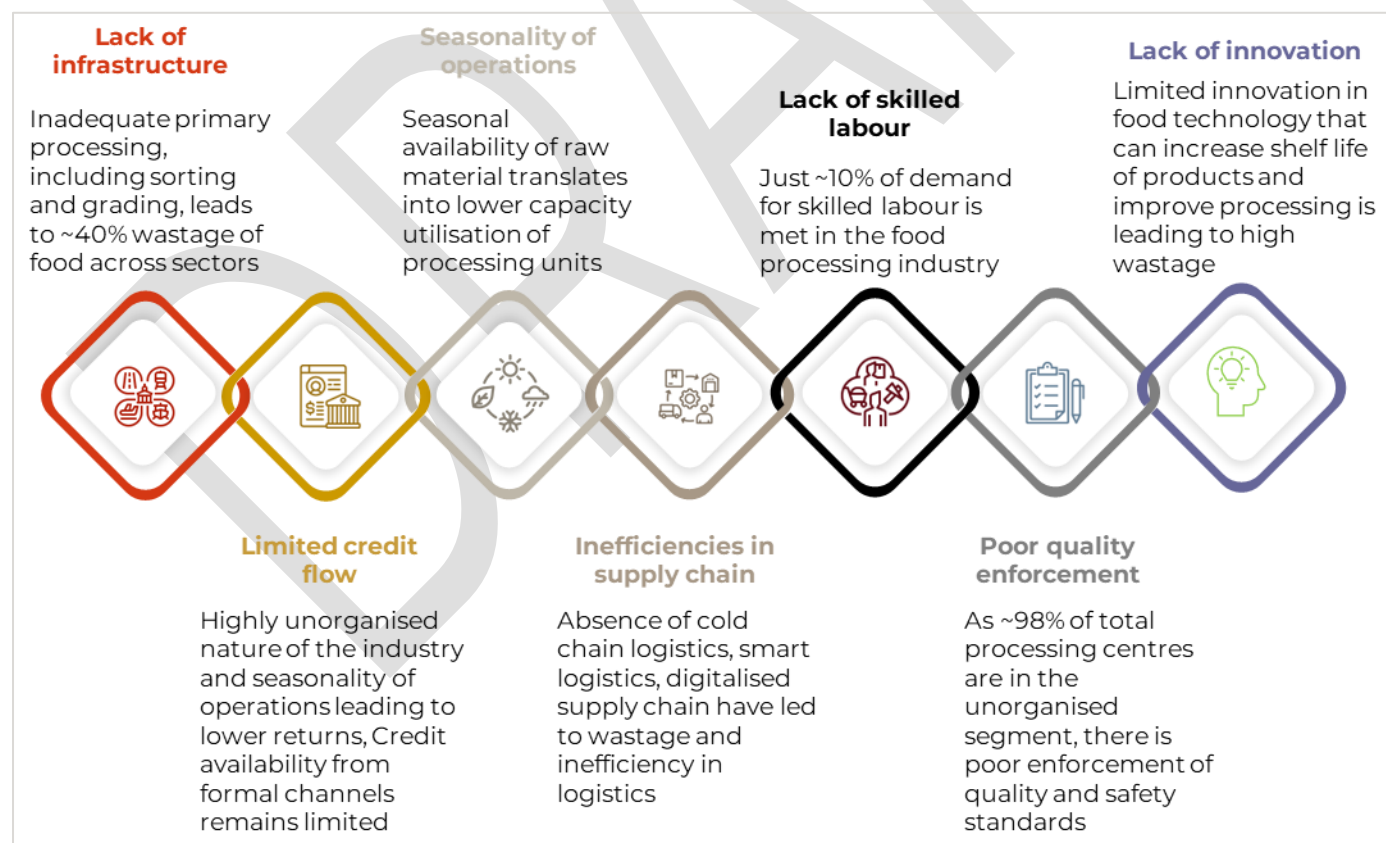

India's food imports

Although India is a leading producer and exporter of agricultural goods, it does engage in imports of certain agricultural commodities. The table provided below illustrates the primary imported commodities in India, as well as other nations that import these same products.

Table 2: Key importing commodities into India

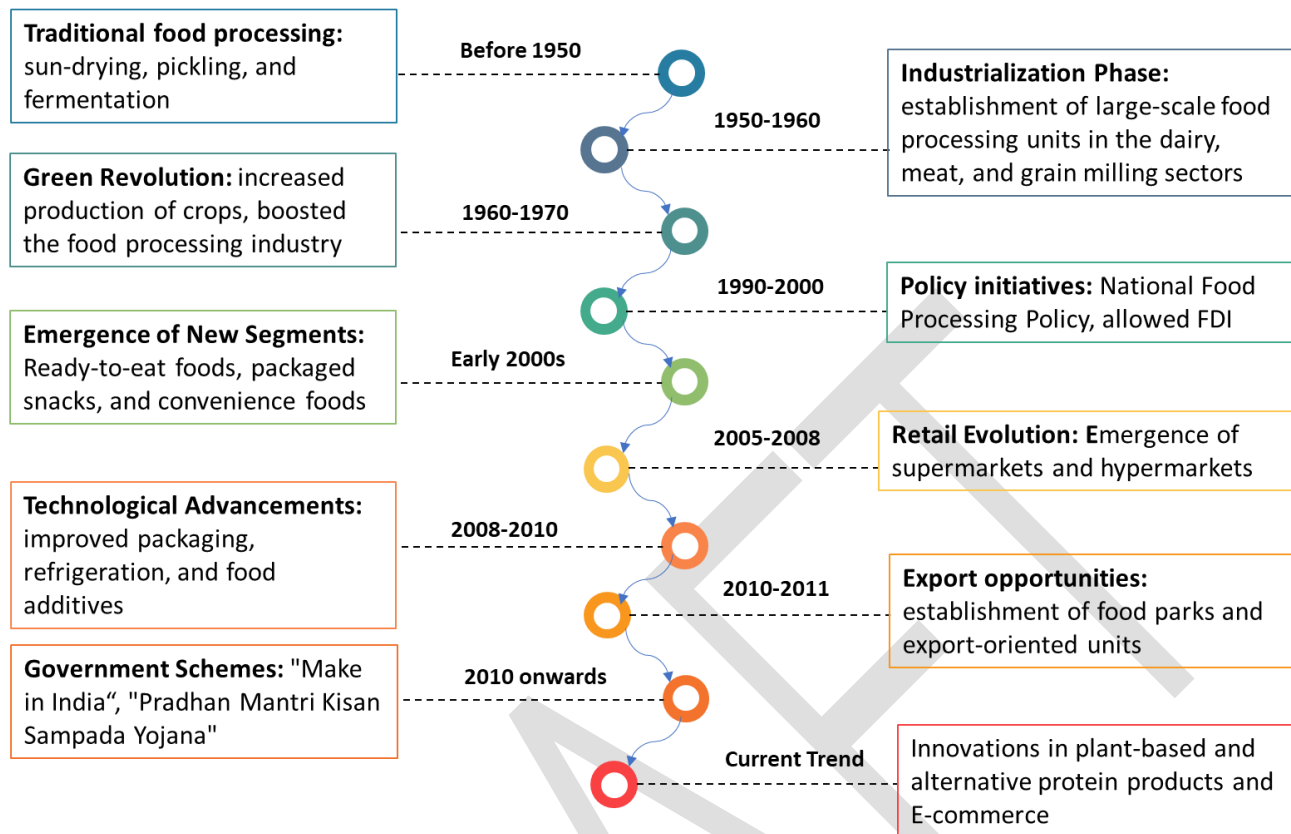

Food product	India's import as of FY23 (Rs. Crores)	India's rank in imports	Top 3 countries in imports
Edible Oil	1,66,924	1	India, China, Pakistan
Pulses	15,986	1	India, China, Pakistan
Cashew Kernels	14,370	1	India, Netherlands, Vietnam
Alcoholic Beverages	6,152	33	USA, China, Germany
Cocoa Products	3,531	30	Netherlands, Belgium, Estonia

Challenges

Source: MOFPI annual report 2022, FICCI study on rising skill demand a major challenge for Indian food industry

Evolution of food processing policies

Policy tailwinds

PMKSY (2017)

Modern infrastructure in processing, storage and transportation

BE 2023-24: Rs 923 Cr

Rs 4484 Cr (E) disbursed

Agriculture Infrastructure Fund (2020)

To improve agri infra by investment in viable projects for post-harvest management and community farming assets

BE 2023-24: Rs 500 Cr

PMFME (2020)

Formalization of unorganized enterprises with access to credit, common facilities, and technical support

BE 2023-24: Rs 639 Cr

Rs 1694 Cr (E) disbursed

PLISFPI (2021)

Capacity expansion of RTE/RTC, production of innovative/ organic product in SME, and branding and marketing of Indian brands in abroad

BE 2023-24: Rs 1530Cr

Source: Ministry of Food Processing Industries, Union Budget 2023-24

Other Schemes and Programmes

Deen Dayal Upadhyaya Grameen Kaushalya Yojana

Demand led skill training at no cost to the rural poor. Pioneers in providing incentives for job retention and career progression. Provides post placement support, migration support and has a strong alumni network

Pradhan Mantri Kaushal Vikas Yojana

Objective to enable Indian youth to take up industry relevant skill training that will help them in securing a better livelihood. Short term training courses are provided to enable quick learning and encourage on the job training

Scheme for Higher Education Youth in Apprenticeship and Skills

Providing industry apprenticeship opportunities to the general graduates. The program aims to enhance the employability of Indian youth by providing 'on the job work exposure' and earning of stipend

A Scheme for Promoting Innovation, Rural Industry & Entrepreneurship (ASPIRE)

The aim of this scheme is to create new jobs, promote entrepreneurship, facilitate innovation and boost economic development at grassroots level. MSME food processors can benefit from this scheme

Credit Guarantee Scheme for Micro & Small Enterprises (CGTMSE)

The scheme aims at motivating first generation entrepreneurs towards self-employment by providing credit guarantee funding for third-party guarantee-free / collateral free loans. Guarantee on credits for loans up to INR 2 crores, without third-party guarantee and collateral

Procurement and Marketing Support (PMS) scheme

The scheme aims at developing the marketability of services and products in the MSME sector by promoting new market access initiatives like organizing / participation in National/International Trade Fairs / Exhibitions / MSME Expo. Promoting access initiatives and awareness about various marketing relevant topics

Lean Manufacturing Competitiveness for MSMEs

To enhance the Domestic and Global Competitiveness of MSMEs through the application of various Lean Techniques. Financial support to be provided to implement lean manufacturing techniques. 90% subsidy of Total Cost of Implementation

Way forward

Formalization of unorganized sector

To ensure accountability and adherence of unregistered processing units towards food safety and regulations, incentives can be provided by way of subsidised capital and operational cost. This way they can be brought under the formal sector

Increase skilled labour

Promoting institutes of national importance to offer formal courses on food processing and create pool of technical manpower and skilled workforce to meet the growing need of the sector

Establishing robust linkage between farmers and processors

To promote processing clusters in production areas and create strong backward and forward linkages from farm gate to retail outlet with logistics support and timely sale of agriculture commodities.

Ex: AMUL (GCMMF) created a strong logistic network between dairy farmers and their processing units that improved dairy processing and minimized wastage

Increasing capital affordability

Introduction of measures to lower cost of capital for the projects and reduce cost of formal credit to make it affordable to both organized and unorganized sector

Ex: KISAN Credit card was made available to all farmers with a credit limit of Rs. 1-2 lakhs bringing them under the ambit of formal credit

Investment in R&D

Provide government grants for in-depth research studies that can devise plans to improve quality of food products and improve operational processes to minimise wastage

Incorporating sustainability*

Using environmentally friendly ways of production and packaging as food processing falls under 'orange' category in the pollution index

Ex: Mondelez India has announced a grant to an NGO that will recycle Multi-Layered Plastic (MLP) waste to create sustainable furniture boards for creating tables, benches and for other uses

*The Ministry of Environment, Forest and Climate Change had brought out notifications that inter-alia refers to prohibition/restriction on operation of industries to protect ecologically sensitive areas or areas of specific importance. This has for the first time brought about the concept of categorisation of industries to "red", "orange" and "green", and has restricted their operation in certain areas of importance. The categorisation is mainly based on size of the industries and the consumption of resources. Pollution due to discharge of emissions and effluents and its impact on health was not considered as the primary criteria.
